

(Left) Outriggers to stabilize the situation.

The Roadrunner uses four angled A-frame outriggers to achieve maximum stability on uneven terrain and allows set-up in close proximity to obstacles. The "jack" legs and aerial torque box are hot-dip galvanized for maximum strength and longevity.

(Right) A variety of body styles to meet your needs.

The Roadrunner is available in a rear mount pump configuration which offers even more compartment space. In either model, the simple pumper-style hosebed accommodates a full load of supply or attack lines. The Roadrunner is available with a rear-mounted fire pump for maximum compartment space.

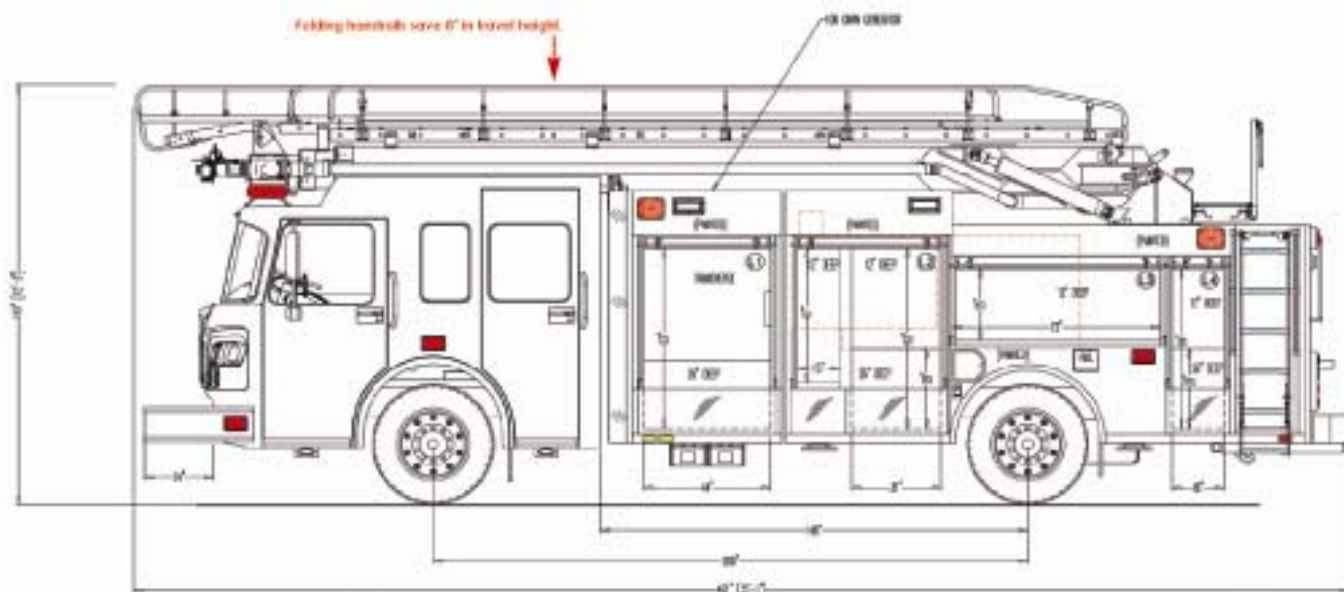

Roadrunner Aerial
Fast and Forceful Response

Reach higher.

The Roadrunner aerial boom stretches to 68', while most comparable devices top out at 50' to 65'. With an elevation sweep from -10° to 80°, the Roadrunner has the widest operational range of its class. The aerial's 500 lb. rated tip capacity also allows multiple firefighters to climb when needed.

Folding handtrucks save 6" in travel height.

Convenient, spacious storage.

The body and compartment designs offer plenty of storage space for equipment and gear. Ground ladder tunnels or an overhead rack option are available to maximize storage. A convenient fold-out, angled staircase allows access to the aerial for optimum firefighter safety.

Improved aerial control.

Like other Rosenbauer aerial models, the Roadrunner's boom is operated by three controllers, allowing smooth and accurate aerial placement. An optional radio remote control is available for situations where operating the aerial from a safer or more visible area is desired.

Maintain constant communication.

Whether a side mount or rear mount pump design, the Roadrunner's aerial controls are neatly packaged for easy use by the operator. The aerial intercom system is located with the operator's panel and at the tip of the boom to maintain easy communications.

Performance from above or below.

Equipped with a stable boom and high output nozzle, the Roadrunner dips below grade to -10°. This versatility puts you in control of water flow and in control of the situation.

Real firepower.

The Roadrunner flows water more powerfully than other booms with a unique nozzle that sweeps not only 180° side to side, but also 135° below and 80° above the boom at a full 1250 to 1500 GPM based on monitor selection.

A Blast of Pure Power.

Built entirely at Rosenbauer, the Roadrunner is a true multi-purpose apparatus offering the firepower of a full pumper combined with the reach of an aerial. The Roadrunner features a high-powered, wide sweeping nozzle capable of dousing fires from any angle and is available on a custom or commercial chassis with a variety of tank sizes. With foam system and chemical extinguishing options, the Roadrunner is also a powerful industrial firefighting device. So now you can show fires who's really in charge.

Flow-tested up to 1500 GPM.
